28. An Automated Teller Machine, ATM, comprising:

- a) a computer;
- b) mechanical systems which the computer controls;
- c) a conventional browser, running on the computer, which acts as a user interface and which issues commands intended for the mechanical systems; and
- d) an adapter which receives commands from the browser, relays the commands to the mechanical systems, and receives responses from the mechanical systems.

29. ATM according to claim 28, wherein the adapter further buffers responses from the mechanical systems.

30. ATM according to claim 28, wherein (1) the commands originate from pages displayed by the browser, and (2) the adapter buffers at least some of the responses.
